# OUR MANUFACTURE

## MADE IN FRANCE BOOTS

'Made in France' has been part of the genetic make-up of AIGLE since 1853. Boots, made in natural rubber, are hand-produced in the Ingrandes factory, in Vienne.

Since 2016, AIGLE is certified "**Origine France Garantie**" a famous et restrictive French label, allowing to companies promoting **durable** commitment and high **quality** products.

The brand and its employees are extremely proud to have retained the original production tool and maintained the **production of Aigle boots in France**.

The Ingrandes factory has about **350 employees** working in the different crafts: stitchers, **200 master rubber craftsmen**, pattern-makers, maintenance mechanics, etc.

The **Origine France Garantie** label is the only certification that certifies the French origin of a product.

It provides consumers with **product traceability** giving a **clear and objective** indication of where it is manufactured.

The goal is to bring together companies, promote their expertise and inform consumers.

The conditions for being awarded this label are the following:

- Production or assembly must be located in France.
- At least half of the product's value must come from work carried out in France.

Only **twenty or so textile companies** are certified by the Origine France Garantie label, including Aigle since 2016.

**60**  
MANUFACTURING STEPS  
REQUIRED TO ASSEMBLE A BOOT

**2 YEARS**  
TO LEARN TO RTA BOOT

**200**  
MASTER BOOTMAKERS WHO  
MAKE APPROXIMATELY

**100%**  
HAND-CHECKED  
BOOTS

MANUFACTURING  
In France, at  
Chatellerault

# ONE BOOT = 60 STEPS

## THE FRENCH EXPERTISE, A UNIQUE KNOW-HOW

	<b>1 BOTTE</b> 40% DE CAOUTCHOUC NATUREL 37% DE MATÉRIEAUX RECYCLÉS 40% OF NATURAL RUBBER 37% OF RECYCLED MATERIAL		<b>LE DERNIER SITE DE PRODUCTION DE BOTTES EN CAOUTCHOUC EN FRANCE</b> THE LAST RUBBER BOOT PRODUCTION SITE IN FRANCE
<b>171 ANS</b> D'EXPIÉRIENCE DU CAOUTCHOUC 171 YEARS OF RUBBER EXPERTISE		<b>2500</b> PAIRES DE BOTTES PAR JOUR PAIRS OF BOOTS EACH DAY	
	<b>60</b> ÉTAPES DE FABRICATION MANUFACTURING STEPS		<b>24 MOIS</b> DE FORMATION POUR DEVENIR MAÎTRE BOTTIER MONTHS OF TRAINING TO BECOME A MASTER BOOTMAKER
		<b>210</b> MAÎTRES BOTTIERS BOOTMAKERS	

60 steps are required in production process to put together a boot. Master rubber craftsmanship since 1853, Aigle makes its famous boots by hand, a unique know-how in France.

# ONE BOOT = 60 STEPS

## THE FRENCH EXPERTISE

### 1 MIXING

Specific Aigle process allowing natural rubber to obtain its unique characteristics of comfort and resistance, by mixing raw rubber with its various components.

### 2 CALENDERING

Manufacturing process to obtain thin layers of rubber with precise characteristics of thickness and width. These layers are then ready for the affixing of the liners.

### 3 PREPARATION

All the constituent elements are prepared in order to allow the final assembly of the boot.

### 4 ASSEMBLY

Each element (reinforcements, upper, border, gusset, tab, logo, sole, etc.) is mounted on a form by hand, with precision.

### 5 VULCANIZATION

The boot is vulcanized (cured) in an autoclave. It is after vulcanization that the rubber obtains its main characteristics of tightness, resistance and flexibility.

### 6 FINISHING

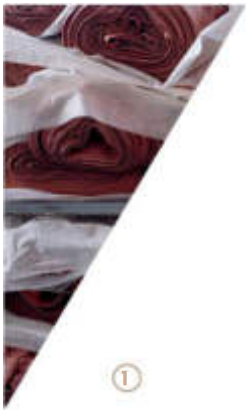

100% of the boots are tested for waterproofness. Boxed, the boots are shipped around the world.

# THE NATURAL RUBBER

## A RESPONSIBLE APPROACH

THE BOOT IS MADE OF AN AVERAGE OF **37% RECYCLED MATERIALS**  
Rubber scraps are recycled and reintegrated into the mixes.

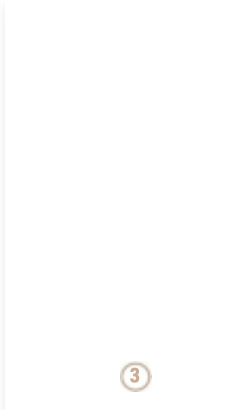

1

**UPPER:**  
Before vulcanization, **40%** of the upper **80%** of the reinforcements are made of recycled rubber.

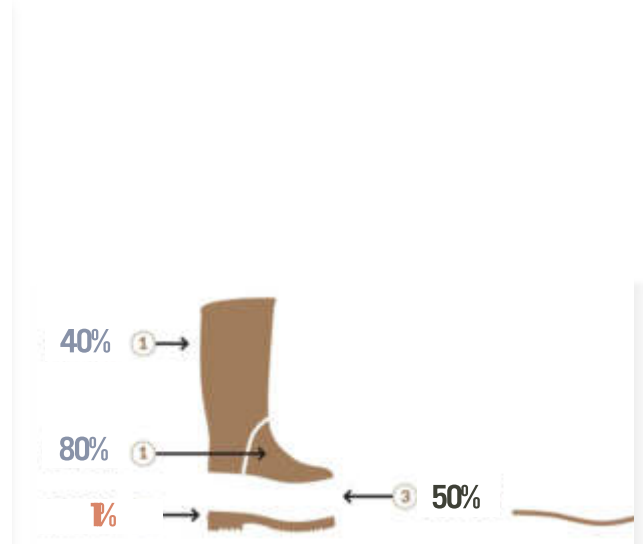

2

**SOLES:**  
The soles contain **1%** recycled rubber.

3

**1st ASSEMBLY:**  
Lining offcuts are recycled and make up **50%** of the first fittings.

RUBBER: MEANS  
«CRYING TREE»  
IN ABORIGINAL (South America).

- Has existed for over 2000 years.
- Rubber needs a tropical climate, it cannot be grown in France.
- Our plantations are located in Thailand and Vietnam.
- From the bark, the latex, a white liquid, is extracted and then transformed into rubber.

• We harvest 1/3 glass per day per tree of rubber tree sap.

- 2kg of natural rubber =
- pair of boots

# FW26 COLLECTION INTRODUCTION

# FW26, THE RESET OF AIGLE FOOTWEAR

**Before there was 'outdoor',  
there was Aigle.**

Today, we're reclaiming what we started:  
Icons with purpose. Products with proof.  
And a vision that moves forward:

From category presence  
to cultural stance,  
From functional legacy  
to future-proof readiness.

**Aigle shapes the terrain.**

# OUR FEET ARE OUR WINGS

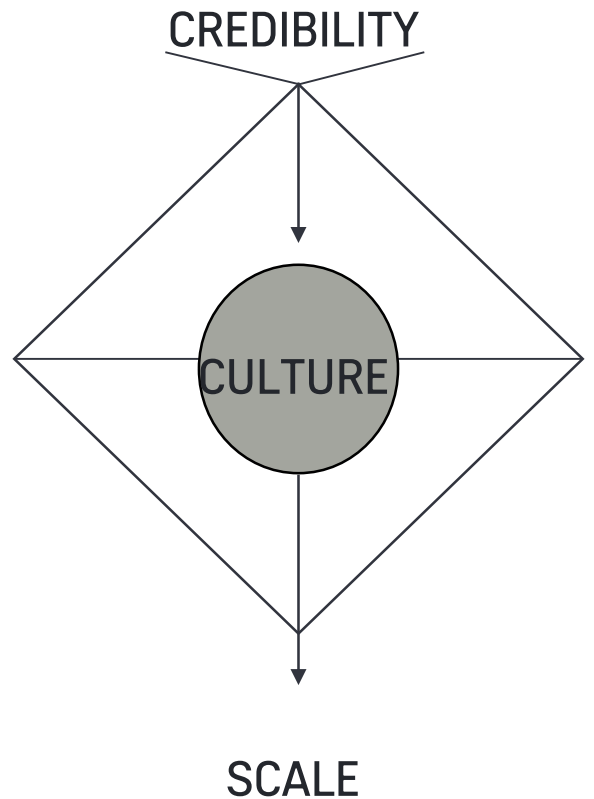

Footwear isn't a new category for AIGLE. It's where the brand began: with protection as purpose, and motion as mindset.

Today, as footwear becomes the fastest-moving category in outdoor, AIGLE takes a structured step forward. Not by joining the race. But by building its own path: engineered, credible, and culturally aware.

**FW26:  
the turning point**

**New products,  
new vision  
& and a clear model**

# FW26 NEWS !

## Chris Kyvetos, a leading voice in modern footwear

### *TO LEAD THIS RESET, AIGLE BRINGS IN A VOICE THAT UNDERSTANDS BOTH GRIP AND CULTURE*

Founder of Sneakerboy, former Menswear Buying Director at Mytheresa, and co-creator of Athletics FTWR, Chris Kyvetos is a visionary of modern footwear - retail, product, and culture combined. He's here to build foundations:

- A product-led approach to credibility
- A sharp design system rooted in function
- A cultural awareness that opens new territories without losing control

## A SIGNATURE BORN FROM TERRAIN & ELEVATION

To express Lifeproof®, we needed a symbol: something elemental, singular, and strategically unifying.

The view of the Eagle is a single gesture, traced by the ridge of a mountain. A contour seen from above: the perspective of flight, clarity, and elevation.

We turned 170 years of protection into a performance language & vision

# LIFE PROOF®

**LIFEPROOF®  
OUR FOOTWEAR USP**

Built for every terrain, made for everyday freedom.

From city streets to wild trails,  
Aigle crafts footwear that lasts: effortless in style, uncompromising in protection, made for movement.

## LEACH PRODUCT IN FW26 IS BUILT ON A PROPRIETARY TRIAD OF TECHNOLOGIES:

### ENRGCORE®

A high-rebound supercritical foam midsole.  
Initial rebound: 88% — Rebound after 800km: 73%  
— Lightweight & fatigue-resistant

### DURACOMP®

A lab-tested abrasion-resistant rubber compound DIN  
Abrasion: 72 mm<sup>3</sup>, 100,000 flex cycles passed —  
Comparable to Vibram® Megagrip

### TECHNISUPPORT®

A torsion control element  
Reintroduced after 20 years — Improves mid-foot  
stability and natural mobility

## ***AIGLE'S NEW TRAIL SNEAKER BUILT FOR MOVEMENT ACROSS CITY AND TERRAIN***

Lightweight, breathable, and equipped with ENRGCORE® cushioning, a high-grip DURACOMP®MegaGrip outsole, and the brand's signature View of the Eagle overlay for stability and design identity.

**Price:** €240

**Core color direction:** Black, White Silex, Empire Navy, Lait Sand

**FLOWLITE**

## ***A REDESIGNED AND RE-ENGINEERED VERSION OF AIGLE'S ICONIC CANVAS BOOT FROM THE ARCHIVE, NOW BUILT FOR MODERN CROSSOVER WEAR***

Available in Mid and Low, with recycled uppers and ENRGCORE® + DURACOMP® platforms for all-day comfort and grip + TECHNISUPPORT® torsion element for underfoot stability.

**Price:**

**Core color direction:** Black, Desert Beige, Army Green (canvas & suede)

**TENERE ICON**

## ***A WATERPROOF REBOOT OF AIGLE'S LEGENDARY MILITARY-STYLE BOOT***

Updated with GORE-TEX® protection, DURACOMP® HighGrip traction, and the View of the Eagle stitched quarter panel. Designed for everyday utility across all conditions, with archival lines and modern performance.

**Price:** €210

**Core color direction:** Tabac, Bordeaux, Black

**TENERE GTX**

## ***AIGLE'S MOST ADVANCED HIKING BOOT, MADE FOR MULTI-DAY OUTDOOR PERFORMANCE***

Featuring GORE-TEX®, Vibram® soles, full-foot support, and the View of the Eagle overlay for structure, identity, and terrain-ready confidence.

**Price:** €200 (Low) | €220 (Mid)

**Core color direction:** Silex, Navy (Low) | Osier, Black (Mid)

**TREK**

# PARCOURS CELEBRATES ITS 30TH ANNIVERSARY

To celebrate three decades of innovation and field expertise, Aigle unveils new products designed for today's hunters: faithful to the original spirit, reimagined for the future.

*FOR 30 YEARS, 1 TRUTH:  
THE FIELD FIRST*

Our method

For hunters  
by hunters

***WE DIDN'T BRIEFED HUNTERS,  
WE WALKED WITH THEM:  
MORE THAN 20 FIELD  
INTERVIEWS,  
MULTIPLE TERRAINS, MULTIPLE  
ROLES..***

What we learned?

- Hunters adapt to terrain, rhythm, season, species - and their gear must too
- There's no universal boot. Only specific needs
- Comfort is non-negotiable. But protection and agility must coexist
- What matters: grip, hold, silence, modularity, breathability

# LET'S FOCUS ON THE PRODUCTS

## PARCOURS 3.0 - CORE MODEL

### THE FOUNDATION

- New generation of Aigle's best-selling boot
- Reinvented structure: lighter, more balanced, more supportive
- 3-density sole with ActiGrip rubber for grip, energy return and terrain adaptability
- Visible yellow heel: better cushioning and iconic brand code

## PARCOURS 3.0 TROPHÉE

### THE PREMIUM EXPERIENCE

- Smooth interior finish: slipper-like feel
- Focus on comfort and thermoregulation
- Best-in-class insulation, breathable and flexible
- A refined choice for hunters who demand long-wear ease

## PARCOURS 3.0 NEOMESH

### FOR WET, COLD AND RUGGED ENVIRONMENTS

- Inner neoprene mesh lining for fast-dry and insulation down to -15°C
- Reinforced construction: ideal for winter and humid terrains
- Eco-conscious materials
- Quick drying, technical build

## THE NEW PARCOURS 3.0 TROPHEE, THE PREMIUM VERSION OF THE ICONIC BOOT WITH A FULL LEATHER LINING

### DESCRIPTION:

The Parcours 3.0 Trophée combines durability with premium comfort. Its ActiGrip sole provides grip and long-lasting performance, enhanced by the anti-fatigue system that returns energy with every step. Featuring a full leather lining, it delivers exceptional slipper-like comfort, excellent thermoregulation suitable for virtually all non-extreme temperatures, and optimal foot support. Easy to slip on with the RIRI zip, fitted and sporty, it stands out with premium details: leather foxing, embossed leather patch, and leather lining. Made in France, it accompanies every mission with elegance, performance, and reliability.

### MAIN USE:

## NOTRE EXPERTISE DE MAÎTRE CAOUTCHOUTIER - OUR MASTER RUBBER CRAFTSMAN EXPERTISE

Maître caoutchoutier depuis 1853, Aigle confectionne la majorité de ses bottes à la main en France. Grâce à une expérience faite de tradition et de technologie, Aigle tient chaque jour sa promesse de protection et de confort. Depuis 170 ans, des hommes et des femmes entretiennent une précieuse chaîne du savoir-faire. Aujourd'hui dans l'usine de Châtellerault, en France, 194 artisans réalisent à la main chaque jour 4000 paires de bottes.

L'exigence de qualité et le souci du détail sont au cœur de la conception des bottes Aigle pour garantir un produit juste et durable.

*Master boot-makers since 1853, Aigle makes the majority of its boots by hand in France. Thanks to experience founded on tradition and technology, each day Aigle fulfils its promise of protection and comfort. For 170 years, men and women have maintained a valuable tradition of expertise. Today, at the Ingrandes factory in France, 194 craftsmen and women produce every day 4,000 pairs of hand-made boots.*

*High standards of quality and attention to detail are at the heart of the design of all collections to guarantee a durable and essential product.*

# 1853

Hiram Hutchinson rachète le brevet de vulcanisation du caoutchouc et crée la marque de bottes « À l'Aigle ».

*Hiram Hutchinson buys rubber vulcanization patent and creates the brand of boots "A l'Aigle".*

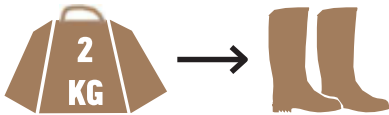

## 1 - MÉLANGEAGE

### MIXING

Processus spécifique Aigle permettant au caoutchouc naturel d'obtenir ses caractéristiques uniques de confort et de résistance, par le mélange de caoutchouc brut avec ses divers composants.

*A specific Aigle process that allows natural rubber to obtain its unique characteristics of comfort and strength by mixing raw rubber with various substances.*

Caoutchouc  
Rubber

## 2 - CALANDRAGE

### CALENDERING

Procédé de fabrication permettant d'obtenir de fines couches de caoutchouc aux caractéristiques précises d'épaisseur et de largeur. Ces couches sont alors prêtes à l'apposition des doublures.

*A manufacturing process that obtains thin layers of rubber with specific characteristics of thickness and width. These layers are then ready for the application of the linings.*

# 4 000

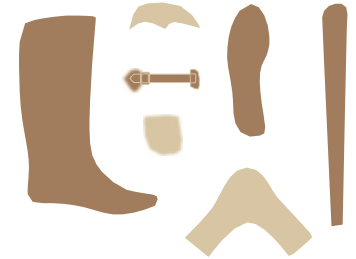

Paires réalisées à la main / jour  
Pairs made by hand every day

## 3 - PRÉPARATION

### PREPARATION

Tous les éléments constitutifs sont préparés afin de permettre le montage final de la botte.

*All the components are prepared so as to allow the final assembly.*

# 60

Étapes pour fabriquer  
une botte  
Steps to make a boot

## 4 - MONTAGE

### MOUNTING

Chaque élément (renforts, tige, bordure, soufflet, patte, logo, semelle...) est monté sur une forme à la main, avec précision.

*Each element (reinforcements, upper, border, gusset, strap, logo, sole...) is precisely mounted on a last by hand.*

## 5 - VULCANISATION

### VULCANIZATION

La botte est vulcanisée (cuite) dans un autoclave.  
*The boot is cured (baked) in an autoclave.*

# 140°C

C'est après vulcanisation que le caoutchouc obtient ses caractéristiques principales d'étanchéité, de résistance et souplesse.

*It is after this vulcanization that the rubber develops its principle characteristics of watertightness, durability and flexibility.*

## 6 - FINITION

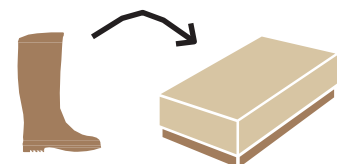

### FINISH

100% des bottes sont testées pour l'étanchéité.  
*100% of the boots are tested for waterproofness.*

Mises en boîte, les bottes sont expédiées à travers le monde.

*After being boxed the boots are shipped throughout the world.*

Avant l'expédition de ses bottes et de ses chaussures à travers le monde, Aigle mène une démarche qualité rigoureuse pour garantir à ses consommateurs les produits les plus résistants, confortables et s'assurer de leur durabilité.

Before any of its boots are shipped across the world, Aigle performs a rigorous quality process, to ensure its customers receive resisting, comfortable and durable shoes.

### POUR LA BOTTE EN CAOUTCHOUC / FOR RUBBER BOOTS

#### 1. Dans notre laboratoire intégré à Châtelleraut :

- Tests sur les lots de caoutchouc
- Tests de flexion de la chaussure
- Tests d'abrasion des semelles

#### 2. Sur les lignes de production :

- Test d'étanchéité sur 100% des bottes
- Contrôle visuel de 100% des bottes avant leur mise en boîte

#### 3. Dans le laboratoire accrédité du CTC\* :

- Tests d'innocuité chaque année
- Certifications des nouvelles semelles avec fonction (confort ou résistance au glissement)

\*Centre Technique du cuir et de la Chaussure

#### 1. In our internal laboratory in Châtelleraut :

- Rubber mix tests
- Whole shoe flexing tests
- Outsole abrasion tests

#### 2. On production lines :

- Waterproofness test on 100% of boots
- Visual control on 100% of boots before packing

#### 3. In an independant and accredited laboratory CTC\*

- Yearly safety tests
- New outsole certification tests (for comfort or anti-slip)

\*Leather and footwear technical center

### POUR LA CHAUSSURE / FOR FOOTWEAR

#### 1. Dans le laboratoire accrédité du CTC

- Tests de durabilité des matières (tige/semelle) et du montage
- Tests de conformité des matières aux normes européennes REACH
- Certification complète des chaussures de sécurité

#### 2. Sur les lignes de production

- Inspection par sondage de toutes les productions avant livraison
- Inspection par sélection à réception des marchandises

#### 1. In an independant and accredited laboratory CTC

- Materials (upper/sole) and making durability tests
- REACH regulation compliance tests
- safety shoes complete certification

#### 2. On production lines :

- Survey inspection of all bulk productions before shipment
- Selected inspection of all bulk productions when arriving at the french warehouse

Le produit est au cœur de notre activité. Chaque saison, nous nous efforçons de développer des bottes, vêtements et accessoires avec un impact limité sur l'environnement. Allier style, technicité, qualité et durabilité ; nous sommes prêts à relever le défi. Cela passe par une démarche d'écoconception de nos produits, qui prend en compte leurs impacts sur toute leur chaîne de valeur : du choix des matières premières jusqu'à leur fin de vie. Et pour ceux que nos clients ne portent plus, nous proposons des solutions concrètes en faveur de l'économie circulaire.

### NOTRE PRODUIT PHARE : LES BOTTES EN CAOUTCHOUC NATUREL

Depuis sa création en 1853, Aigle est réputé pour ses chaussures et bottes en caoutchouc naturel.

### LE CAOUTCHOUC, MATIÈRE PREMIÈRE NATURELLE

Nos bottes iconiques sont réalisées en partie à base de caoutchouc naturel, dans notre usine d'Ingrandes-sur-Vienne. Notre laboratoire a élaboré un mélange appelé « gomme », conçu à partir de caoutchouc naturel et dont la recette est tenue secrète depuis plus d'un siècle.

Le caoutchouc naturel apporte des caractéristiques techniques indispensables, comme la robustesse, la résistance à l'abrasion, la résilience ou encore la souplesse.

Le caoutchouc est une matière naturelle d'origine végétale, provenant de la transformation du latex de l'arbre hévéa. Un arbre produit en moyenne un demi-verre par jour. Un peu moins de 2 kg de caoutchouc sont nécessaires à la fabrication d'une paire de botte.

### DES COLLECTIONS ENGAGÉES / COMMITTED COLLECTIONS

Indicateur 	Résultat 2021	Résultat 2023
% de produits Aigle for tomorrow dans nos collections - références coloris (en %)	16 %	40 %

Performance indicator	2021 Results	2023 Results
% of Aigle for tomorrow products in our collections - colour SKUs (%)	16 %	46 %

### OUR PRODUCTS

The product is the central focus of our activity. Each season, we work hard to design boots, clothing and accessories with a reduced impact on the environment. Combining style, technical performance, quality and durability; we believe we're up to the task. We are able to achieve this thanks to our product eco-design process, which takes into account the product's impacts all along the value chain: from the choice of raw materials until the end of the product life. And when it comes to items no longer worn by our customers, we offer concrete solutions that promote the circular economy.

### OUR STAR PRODUCT: NATURAL RUBBER BOOTS

Since its creation in 1853, Aigle has been renowned for its natural rubber shoes and boots.

### RUBBER, A NATURAL RAW MATERIAL

Our iconic boots are partially made using natural rubber, at our factory in Ingrandes-sur-Vienne. Our laboratory has created a blend known as "gomme" rubber, made using natural rubber and according to a recipe that has remained secret for more than a century.

Natural rubber provides essential technical characteristics, such as robustness, abrasion resistance, resilience and flexibility.

Rubber is a natural, plant-based material obtained by processing latex derived from the rubber tree. A tree produces an average of half a glass per day. A little less than 2 kg of rubber is needed to make on pair of boots.

### NOTRE LABELLISATION « ORIGINE FRANCE GARANTIE » GUARANTEED "MADE IN FRANCE" LABELLING

En 2022, nous avons produit plus de 600 000 paires de bottes dans notre usine d'Ingrandes.

*In 2022, we produced over 600 000 pairs of boots at our Ingrandes factory.*

Nous défendons un savoir-faire tricolore : notre manufacture historique est un véritable bijou dans lequel 194 maîtres bottiers confectionnent chaque jour les bottes Aigle depuis 1853.

*We represent French craftsmanship: our historic factory is a true gem in which 194 master boot-makers have been making Aigle boots every day since 1853.*

Les bottes fabriquées dans notre manufacture d'Ingrandes-sur-Vienne sont labellisées Origine France Garantie depuis 2016. Ce label, renouvelé avec succès en 2022, nous permet de poursuivre notre engagement en faveur de la promotion du savoir-faire français.

*The boots manufactured in our Ingrandes-sur-Vienne factory have had "Origine France Garantie" labelling since 2016. This label, successfully renewed in 2022, allows us to continue our commitment to promoting French expertise.*

### LA RÉUTILISATION DE NOS CHUTES DE CAOUTCHOUC

Afin de limiter notre consommation de matière première et nos déchets, nous réduisons au maximum la perte tout au long de la chaîne de production de nos bottes.

Ainsi, nous avons mis en place un processus de récupération des chutes de caoutchouc non vulcanisé qui nous permet de les réintroduire dans nos modèles standards de bottes. Ces chutes sont renvoyées à nos fournisseurs pour être réinjectées dans leur mélange. La gomme obtenue nous sert alors à concevoir différentes parties de la botte, notamment la tige et les renforts.

Les chutes de doublures, composées de tissu et de caoutchouc non vulcanisé, sont quant à elles préalablement broyées puis réinjectées dans une gomme spécifique destinée à réaliser les semelles intérieures.

Le taux de matière recyclée par paire de bottes oscille entre 30 et 35%.

Le caoutchouc recyclé est utilisé :

- => Dans nos tiges
- => Dans nos renforts (matière recyclée à + de 80%)
- => Dans notre mélange de caoutchouc extérieur : utilisation de mélange neuf ou de mélange recyclé. Dans le cas de l'utilisation du mélange recyclé, il est composé de 40% de caoutchouc recyclé
- => Dans certaines de nos semelles

### REUSING OUR RUBBER OFFCUTS

To limit our use of raw materials and minimize our waste, we keep losses to an absolute minimum for the entire length of the boot production chain.

To this end, we have established a non-vulcanized rubber offcut collection process which allows us to reuse the materials in our standard boot models. These offcuts are sent to our suppliers to be reinjected into their mix. This rubber will then be used to design the various parts of the boot, in particular the upper and the reinforcements.

The lining scraps composed of non-vulcanized rubber and fabric are initially ground then reinjected into a specific rubber intended to make the insoles.

The percentage of recycled material per pair of boots varies between 30 and 35%. Recycled rubber is used:

- => In our uppers
- => In our reinforcements (more than 80% recycled material)
- => In our rubber mix for boot exteriors: use of new mix or recycled mix. If a recycled mix is used, it'll contain 40% recycled rubber
- => In some of our soles

*Exterior blends: 40% of weight made from recycled rubber blend  
Reinforcements: 90% of weight made from recycled rubber blend  
Insole: at least 50% of recycled textile (lining scraps)*

## BOTTES EN CAOUTCHOUC / RUBBER BOOTS

Pour conserver leurs propriétés et leurs brillances, les bottes en caoutchouc doivent faire l'objet d'un entretien spécifique.

To ensure rubber boots preserve all their qualities and shine, they must be cared for in a special way.

**1.**  
Nettoyer régulièrement les bottes à l'eau claire ou légèrement savonneuse et après chaque utilisation en cas d'activités de jardinage, chasse, nautisme ou pêche car le matériau est sensible aux produits chimiques (engrais, pesticide, lisier, etc.). Utiliser une brosse souple en cas de taches importantes.

Clean the boots regularly with clean or slightly soapy water and after each use when gardening, hunting, sailing or fishing as the material is sensitive to chemical products (fertilizer, pesticide, manure, etc.). Use a soft brush if stains are hard to remove.

**2.**  
Sécher les bottes à l'air libre ou à l'aide d'un chiffon non pelucheux.

Leave the boots to dry in fresh air or dry with a lint-free cloth.

**3.**  
Pour les bottes « made in France » uniquement, utiliser le Swipol une fois par trimestre pour protéger le matériau, raviver les qualités du caoutchouc et la brillance d'origine de la botte.

*Spray de silicone en phase aqueuse sans solvants, sans parfum et sans gaz à vaporiser en respectant une distance de 10 cm et essuyer à l'aide d'un chiffon non pelucheux.*

For « made in France » rubber boots only, use the Swipol once every quarter to protect the material, to revive the rubber's qualities and the boot's original shine.

*Solvent-free, fragrance-free, gas-free aqueous-phase silicone spray to be sprayed at a distance of 10 cm then wiped with a lint-free cloth.*

**4.**  
Le caoutchouc étant sensible à la lumière (UV), ne jamais laisser sécher les bottes près d'une source de chaleur ou en exposition directe au soleil. Stocker les bottes bien droites dans un endroit sec, frais et hermétique. L'utilisation d'embauchoirs est conseillée.

As rubber is light-sensitive (UV), never leave the boots to dry close to a source of heat and avoid direct exposure to the sun. Store the boots upright in a fresh, dry, airtight place. It is advisable to use shoe trees.

## CHAUSSURES / SHOES

**1.** Nettoyer l'intérieur et l'extérieur de la chaussure à l'aide d'un chiffon humide non pelucheux.

**2.** Ne jamais sécher des chaussures humides près d'une source de chaleur, ni en exposition directe au soleil.

**3.** Entretien des cuirs à aspect velours (croûte de cuir, nubuck...):

- brosser la surface à l'aide d'une brosse souple afin d'ôter la poussière
- appliquer un imperméabilisant
- ne jamais utiliser de cirage

**NB:** la gomme à daim doit être utilisée avec parcimonie afin d'éviter l'abrasion rapide de la fibre velours.

**4.** Entretien des cuirs à aspect lisse :

- essuyer la surface à l'aide d'un chiffon doux humide
- appliquer un produit à base de cire afin de créer une pellicule de protection sur la chaussure

**NB:** appliquer une petite quantité de produit afin de ne pas perturber l'effet de finition initial de la chaussure.

Ne pas appliquer de graisse qui pourrait tacher le cuir.

1. Clean the inside and outside of your shoes with a damp, lint-free cloth.

2. Never dry wet shoes near a heat source or in direct sunlight.

3. Care of shoes with a velvety surface (split leather, nubuck...):

- brush the surface with a supple brush to remove dust!
- apply waterproofing
- never use wax

**NB:** suede cleaning blacks should be used sparingly to avoid rapid wear of the nap.

4. Care of smooth leather shoes:

- wipe the surface with a soft, damp cloth
- apply a wax-based product to create a protective film on the shoe

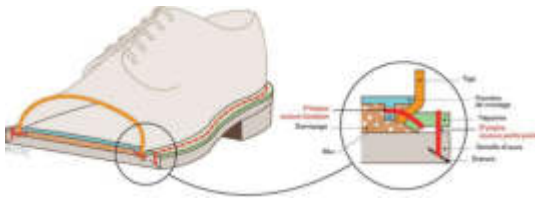

**NB:** apply a small amount of product in order not to change the original shoe finish.

Do not apply grease that might stain the leather.

## MONTAG

### COUSU GOOD YEAR

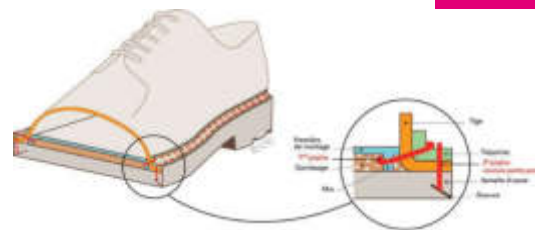

### COUSU GOOD YEAR

Cousu Good Year (ou cousu trépointe) : le montage est réalisé par couture de la semelle et de la première de montage sur la tige, via l'utilisation d'une trépointe cousue. Gage de qualité, ce type de montage apporte une solidité maximale de la semelle sur la tige. Le cousu Good Year existe mécaniquement depuis 1872, cette machine a été inventée par Charles Good Year Junior.

*Goodyear Welt construction: the assembly is done by sewing the sole and the midsole to the upper through using a sewn welt. A guarantee of quality, this type of assembly provides maximum adherence between the sole and the upper. Goodyear Welt assembly has been done mechanically since 1872, by a machine invented by Charles Goodyear Junior.*

### COUSU NORVÉGIEN

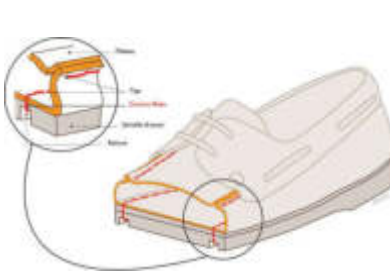

### COUSU NORVÉGIEN

Cousu norvégien : type de montage dérivé du montage

Good Year. La tige montée sur la forme est fixée au mur de gravure de la première par une couture horizontale, la première couture. La tige est ensuite repliée vers l'extérieur et cousue à une semelle par une deuxième couture verticale. Les deux coutures sont visibles. Le montage norvégien peut se faire avec ou sans trépointe. Le garnissage offre un grand confort et une bonne solidité. Les chaussures fabriquées ainsi maintiennent bien le pied et ont une excellente résistance à l'humidité.

*Norwegian Welt construction: similar type of stitching to the Good Year welt. The upper assembly is fixed to the midsole's channel wall with horizontal stitching which is the first seam. The upper is then folded outwards and sewn to the sole by a second vertical seam. Both seams are visible. Norwegian stitching can be with or without welt. The tiller provides good strength and comfort. Norwegian stitched shoes support the foot well and are very water-resistant.*

### Cousu Blake

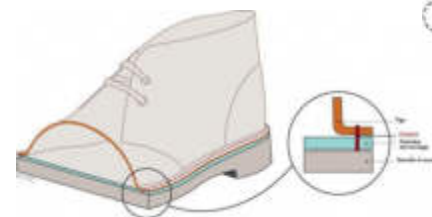

### COUSU BLAKE

Cousu Blake : le nom de cette technique vient de son inventeur, Monsieur Leyman Reed Blake, et date de 1858. La tige est montée sur une première puis fixée avec de la colle. Une couture de part en part traverse la semelle, la tige et la première. La gravure vient souvent protéger la couture côté extérieur. Cette technique de montage apporte une solidité supplémentaire de la semelle.

*Blake construction: the name of this technique comes from its inventor, Mr Leyman Reed Blake, and dates from 1858. The upper is mounted on a midsole then glued. A stitch then passes through the sole, the upper and the midsole. Channels are often used to protect the outside seam. This assembly technique lends additional strength to the sole.*

### Cousu sandalette

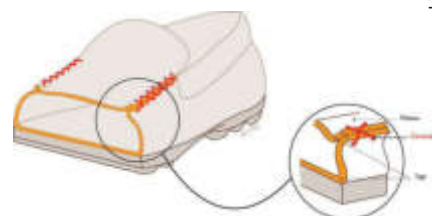

### COUSU SANDALETTE

Cousu sandalette : la tige est montée et pliée vers l'extérieur. Elle est fixée sur la première débordante par une couture petits points, des agrafes ou de la colle. Souvent on vient coller en plus une semelle de marche sur la première. C'est un montage qui assure une bonne flexibilité.

*Sandal construction: the upper is folded over and assembled. It is attached to the midsole by a series of small stitches, or staples or it is glued. Often an additional outsole is glued to the midsole. This type of assembly provides good flexibility.*

### Montage mocassin

### MONTAGE MOCASSIN

Montage mocassin : cette construction est aussi appelée montage tubulaire. La confection de la tige du mocassin se termine par son plateau. La couture plateau est souvent faite à la main. La fixation de la semelle est faite par couture de part en part, par collage ou par injection. Les chaussures fabriquées selon ce procédé sont très souples et sont très légères.

*Moccasin construction: this technique is also known as tubular assembly. The moccasin's upper ends at its outer edge. The stitching is often done by hand. The sole is fastened by stitching, gluing or injection.*

### VULCANISATION DIRECTE

### VULCANISATION DIRECTE

Vulcanisation directe : procédé de vulcanisation directe qui apporte solidité et durabilité. Cet assemblage lie parfaitement le dessus de la chaussure et la semelle en caoutchouc. Cette technique assure la résistance dans le temps. Le débordement du caoutchouc sur la toile est un gage de qualité.

*Direct vulcanization construction: direct vulcanization method offering sturdiness and durability. This assembly perfectly links the upper and the rubber sole. This technique ensures lime resistance. The overflow of the rubber on the canvas is a guarantee of quality.*

## PROTECTION EXTÉRIEURE / OUTER

**MTD**

### MTD®

Membrane microporeuse imperméable qui agit comme une barrière contre la pluie. La membrane évite le passage de l'eau. Elle est imperméable tout en laissant la transpiration s'évaporer. Le pied reste au sec.

*Waterproof microporous membrane that works as a barrier against rain. The membrane prevents water passage. It is waterproof while wicking perspiration away. The foot remains dry.*

### GORE-TEX®

Le Gore-Tex® est une membrane technique à la fois imperméable et respirante. Elle fonctionne selon le principe de la peau humaine : des milliards de pores microscopiques bloquent l'humidité extérieure mais laissent l'humidité du pied s'évaporer vers l'extérieur sous forme de vapeur d'eau, garantissant un confort en action par tous les temps.

*Gore-Tex® is a technical membrane which is both waterproof and breathable. This membrane works like human skin. Billions of microscopic pores block wind and humidity while at the same time allowing perspiration (as water vapour) to evaporate to the outside, guaranteeing active comfort whatever the weather.*

### WATERPROOF

Le WATERPROOF indique que la matière utilisée sur le modèle est imperméable et bloque donc le passage de l'eau.

*WATERPROOF means the fabric used on the style is waterproof and avoid the water to go through the fabric.*

## SEMELLE EXTÉRIEURE /

### VIBRAM®

Longévité, résistance à l'abrasion et amorti : les semelles Vibram ont depuis longtemps fait leurs preuves sur tous les terrains de l'Outdoor.

*Long life, durability, shock absorbing qualities: Vibram soles have proven themselves for years over all Outdoor terrains.*

## SEMELLE INTÉRIEURE /

### ORTHOLITE®

Semelle intérieure garantissant confort et amorti sur la durée. Fabriquée en polyuréthane, elle absorbe l'humidité et favorise la circulation de l'air autour du pied. Amovible et 100% lavable.

*Insole ensuring long term comfort and cushioning. Made in polyurethane, it absorbs moisture and allows air to circulate around the foot. Removable and 100% washable.*

**AIGLE  
FORM**

### AIGLE FORM

Semelle intérieure garantissant l'équilibre idéal entre respirabilité et amorti sans sacrifier le confort. La respirabilité de la matière permet de créer un environnement plus sec et plus frais sous le pied. La première de propreté absorbe les chocs et offre un support qui épouse le pied.

*Insole for the optimal balance of breathability and cushioning without sacrificing comfort. The breathability of the material creates a drier and a fresher environment underfoot. The insole is shock-absorbing and provides support that adapts to the shape of the foot.*

**softex**

### SOFTEX®

La texture en polyamide non tissé de cette semelle permet une très bonne absorption de la transpiration. Le séchage est rapide, le contact, doux et agréable.

*The texture made from non-woven polyamide of this lining makes it a great absorber of perspiration. It is fast-drying and has a comfortable, pleasant feel.*

## DOUBLURE /

### NÉOPRÈNE

Isolant référent, matériau technique composé d'une mousse de caoutchouc polychloroprène renfermant des microbulles d'air pour l'isolation, doublé polyamide.

*It is a highly technical material made from microcellular polychloroprene rubber foam that has been lined with polyamide.*

**AIGLE FOR TOMORROW**

A partir de 2023, notre programme RSE « Aigle positive Impact » change de nom pour mieux accompagner notre évolution et devient « Aigle for tomorrow ». Cette nouvelle dénomination s’inscrit en conformité avec les lois Climat et Résilience et « Anti-gaspillage pour une économie circulaire » (AGEC). Il est notamment interdit d’écrire qu’un produit est « respectueux de l’environnement ».

Afin d’éviter tout malentendu, notre nouveau nom reflète notre vision engagée pour la mode durable : « Aigle for tomorrow » rappelle notre esprit pionnier. A nous d’agir et d’innover pour changer de l’intérieur notre secteur, pour que l’industrie textile soit toujours plus créative, et pour être à la hauteur des enjeux du futur.

« Aigle for tomorrow » est notre engagement de marque, il guide nos objectifs pour construire - pas à pas - une mode plus responsable. Cette vision s’inscrit dans notre ADN depuis 1853 : Aigle crée des vêtements pour tous les temps et pour longtemps. PARCE QUE CHAQUE GESTE COMPTE.

From 2023, our CSR program "Aigle positive Impact" changes its name to better support our development and becomes "Aigle for tomorrow". This new name is in line with the Climate and Resilience and "Anti-waste for a circular economy" (AGEC) laws. In particular, it is forbidden to write that a product is "environmentally friendly".

In order to avoid any misunderstanding, our new name reflects our committed vision for sustainable fashion: "Aigle for tomorrow" recalls our pioneering spirit. It is up to us to act and innovate to change from within our sector, so that the textile industry is always more creative, and to be up to the challenges of the future.

"Aigle for tomorrow" is our brand commitment, it guides our objectives to build - step by step - a sustainable fashion. This vision has been part of our DNA since 1853: Aigle creates clothes for all weathers without any notion of time. BECAUSE EVERY ACT MATTERS.

Produit, entièrement ou en partie, fait de fibres recyclées issues de l’agriculture biologique ou de fibres cellulosiques, qui limitent leur impact

Fully or partially, made with recycled fibers, organic fibers or sustainable cellulosic fibers

Produit, entièrement ou en partie, fait de fibres animales, qui limitent leur impact

Fully or partially, made with sustainable animal fibers

Un produit répondant aux critères Aigle for tomorrow est un produit qui répond à un des critères ci-dessous:  
A product meeting the Aigle for tomorrow criteria is a product that meets one of the criteria below:

**La matière principale (ou tige) du produit doit être composée au minimum de 50% de fibres engagées selon Aigle.**

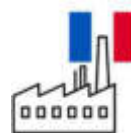

The product’s main material (or up per) must be composed of at least 50% considered fibers.

ET

AND

**Si le produit est rembourré, le rembourrage doit être composé à 100% de fibres engagées selon Aigle.**

If the product is padded (filling), the padding must be made from 100 % considered fibers.

**Être fabriqué en France**
